

Anteco s.r.l.
Energia, Acqua e Ambiente

COME AND VISIT US

From Venice/ Bologna:

Exit from the A4 highway at **PADOVA OVEST** and follow signs indicating Padova-Vicenza.
Proceed toward Vicenza until the town Rubano.

From Milan:

Exit from the A4 highway at **GRISIGNANO** and follow the signs indicating Padova-Vicenza.
Proceed toward Padova until the town Rubano.

Anteco s.r.l.

Via Treviso, 7 - 35030 Rubano (PD)

**SPECIALIZED AND NON-CONVENTIONAL
ENGINEERING AND PLANT-DESIGN**

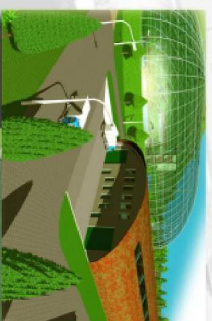

SPECIALIZED AND NON-CONVENTIONAL ENGINEERING AND PLANT-DESIGN

ANTECO S.R.L. IS AN ITALIAN COMPANY WITHIN ENGINEERING AND CONSTRUCTION FIELD, MAINLY WORKING INTO TWO SECTORS:

- Process engineering and plant design
- Environmental survey research

We work with an original technology, thanks to our own patents and studies, primarily in research of physical waste recycling systems and energy saving technologies. We also project and realize biological filters for air and water treatment, fermentative systems, such as solvent and powder saving from metallurgic manufacturing process. We are present in waste water treatment and purification for civil and industrial setting and in primary water treatment as well.

ANTECO S.R.L. turns attention to environmental reclamation up to turnkey plant design.

RATIONAL ENERGY EXPLOITATION FROM RENEWABLE ENERGY SOURCES

- ANTECO projects and builds:**
- anaerobic fermentation process plants of separately collected organic household waste and manure, even provided of trigeneration plants
 - photovoltaic plants and wind power plants
 - gasification plants
 - landfills
 - durable goods recycling and disposal systems
 - metallurgic manufacturing processes for metals saving

RECLAMATION PLANTS

- ANTECO projects and builds:**
- fuel saving systems, such as mineral and vegetable oil saving systems
 - polluted land reclamation plants

METALLURGIC AND MINERAL PROCESSING FOR MINING INDUSTRY

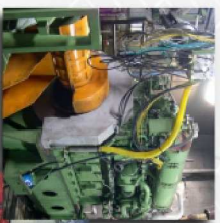

- ANTECO projects and builds:**
- thermal and hydrothermal metallurgic plants
 - gravimetric treatment plants for minerals
 - flotation systems and physical-chemical plants

ANTECO has proper skills and technologies to realize plants. For large job orders, Anteco attends generally to engineering process and to specific machines. For metallic and civil construction, Anteco partners with important companies, which are the best qualified in Italy. We lead international relationships with major German and Spanish companies for international commercial transactions.

Among our accrued interests, we highlight our care on design and maintenance of machines and plants within environmental sector. In particular, in this field Anteco gained knowledge of endothermic engines evolution into innovative engines able to combust new fuels, e.g. biogas. ANTECO accrued its own experience in design and realization of plants, which produce renewable energy by cogeneration system.

AIR AND WATER TREATMENT SYSTEMS

- ANTECO projects and builds:**
- biological systems for air treatment
 - powder filtration systems
 - injection system plants with active powders
 - biological, physical-chemical treatment for water purification
 - osmosis and water purification filtration systems
